Zephyr Portable Sign Stand

26000 Series

Use with 36" and 48" Roll-Up Construction Signs
 Tested and certified to meet the crashworthy requirements of [NCHRP-350](#)

Constructed of steel plate molded into a recycled rubber base (weight 38 lbs). Two molded-in carrying handles allow for easy movement and placement of the Zephyr Portable Sign Stand.

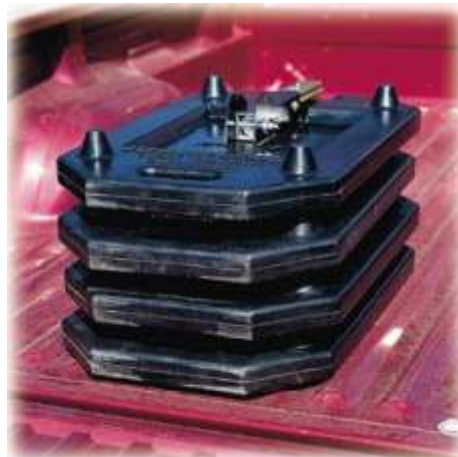

Easy to use — Simply release the lever and raise the mast to lock the Zephyr Sign Stand into the upright position. No further adjustments are necessary. No folding legs that extend out into traffic.

The plastic corner pocket at the bottom of the sign allows for quick and easy mounting of sign to the Zephyr stand. Just insert the corner pocket and press down automatically locking the sign into place. To remove, simply lift the release lever.

The big rubber base (28" x 17.5") is skid-resistant and is stable enough to remain in place, even in windy conditions. Zephyr "tspills the wind" without the use of bulky springs.

Low profile — the Zephyr Sign Stand takes up very little storage space in the trunk (only 4" tall when folded). Stacking lugs are molded into the base for easy storage. The verticle mast folds down and locks in place, minimizing damage during loading, transporting, and unloading.
